Turbo Fun Whitepaper

(last updated: 26th september, 2024)

Index:

turbofun.io

Introduction:

Turbo Fun is an all-in-one platform that integrates cutting-edge tools and technology in the Solana ecosystem, more specifically, the memecoin space.
We empower developers and traders with countless easy-to-use tools designed to make UX better, while making the costs cheaper.

Our objective:

Current tools for developing/trading memecoins are either too expensive or lack features and improvements, In this ever-evolving market, it is crucial to have the necessary tools available to maximize project development, productivity and other key important aspects of this space, this is were we intend to make a change, making these tools safer, better and cheaper than ever, thanks to our *Ecosystem*

Our tools

We currently have a set of tools developed, and are adding more each day, we are committed to developing the best possible version of each tool, current supported tools are:
- Pump.fun bump, comment bots and Launch manager
- Raydium Rank and Volume bots,
- Moonshot Volume bots,
- Trading bot

Stay tuned as we are actively adding new tools to this list!
For more info, please access the "Tools" menu in our main website (turbofun.io)

Ecosystem

As the market is evolving and tools are getting more expensive, we have found a way to combat this inflation and make the best tools available for *Really* cheap prices, this is thanks to our ecosystem, the ecosystem is automatized and processes transactions to activate deflationary behavior, making the $turbofun price less volatile while at the same time, reserving 40% of token revenue to maintain our services, this allows us to provide the prices we currently are able to.
For more info about how the ecosystem operates, read the Ecosystem page on $turbofun → Ecosystem

---

Airdrop Program

During development and testing stage, we are providing an Airdrop program, during this phase, Tools are available for reduced prices and ALL of the Solana spent by users is then converted into a share of the 50 Million reserved tokens for this Airdrop.
Our aim for this program is to test some of our tools before committing to a full release, while rewarding our early users!

Learn How to participate at turbofun.io → Airdrop

Conclusion

In conclusion, we aim to provide a stable platform which users and developers can rely on to trade and launch memecoins, please keep in mind that we are still in development phase and issues may occur, report any issue or bug to our telegram (t.me/turbodotfun) #support
